MOHIT SINGH

Data Analyst · SQL · Power BI · Python

Nagpur, Maharashtra · +91-9322087086 · mohit.singh.260197@gmail.com · linkedin.com/in/mohit-singh-261097 · github.com/Mohit-Singh-261097

PROFESSIONAL SUMMARY

Data Analyst with an **MSc in Data Science (First Class, Coventry University UK)** and four deployed end-to-end analytics projects on GitHub with reproducible code and stakeholder-ready KPI dashboards. Brings 2+ years of production experience building Excel/Tableau dashboards and ETL workflows adopted by operational leads at scale-event venues in the UK. Full-stack: SQL (PostgreSQL, MYSQL), Python (Pandas, Scikit-learn), Power BI (DAX), ETL pipelines, and statistical modelling. Immediately available; open to relocation across India.

PROFESSIONAL EXPERIENCE

Independent Data Analyst · *Self-Employed / Portfolio*, Remote — Jun 2025 – Present

- **Designed and deployed 4 end-to-end BI analytics solutions**, credit risk (PostgreSQL, Power BI), customer segmentation (Python, K-Means, 93K records), HR absenteeism (Scikit-learn, 20K records), and fraud detection (Random Forest, 688K transactions) producing business-relevant dashboards and data-driven decision frameworks, published on GitHub.
- **Completed** Google Advanced Data Analytics Specialisation (Coursera, Aug 2024) and maintained active SQL practice via DataLemur, StrataScratch, and HackerRank throughout.

Operations & Logistics Analytics · *NEC Birmingham*, Birmingham, UK — Jan 2023 – Apr 2025

- **Developed a post-event performance report** comparing planned vs. actual headcount, incident counts, and satisfaction metrics; formalised by management as the standard debrief format across all venue events first data product independently owned from requirement to delivery.
- **Cut shift-scheduling conflicts by 40%** by building a demand-forecast tracker in Excel (pivot tables + conditional logic) for a 60-person team across simultaneous multi-day events; delivered 5+ weekly Tableau reports to operations leads for real-time, data-driven staffing decisions.
- **Reduced end-of-event reconciliation from 3 hrs to 45 min** by engineering a standardised ETL reporting template integrated by all 4 team leads a 75% reduction in close-out time, eliminating manual data consolidation.
- **Sustained a 96% guest-satisfaction score** across 12+ events (10,000+ daily footfall each) by tracking real-time attendance and staffing data to rebalance teams mid-event; cited in quarterly manager review.

PORTFOLIO PROJECTS

Retail Loan Portfolio Risk & Collections Analytics | *PostgreSQL · MySQL · Power BI · DAX*

- **Architected a 4-table star-schema** for ₹784 Cr AUM / 9,800 loans; wrote 12 analytical CTEs surfacing delinquency rates, branch-level risk tiers, and collection-rate trend.
- **Built a 3-page dashboard** consolidating 14 risk KPIs (delinquency rates, DPD tiers, branch exposure) and surfaced ₹50.2 Cr in at-risk collections optimized to replace a 40-hour manual multi-sheet review cycle.

Customer Segmentation — Olist E-Commerce (93K+ customers) | *Python · Scikit-learn · Power BI*

- **Applied K-Means on RFM features**, validated with Hierarchical clustering, defining 4 actionable segments: Budget Casuals (47%), Dissatisfied At-Risk (29%), Premium Buyers (13%), Remote Regionals (10%).
- **Delivered a revenue-recovery playbook** per segment, prioritising Dissatisfied At-Risk (29%) for targeted re-engagement campaigns, with projected recovery scenarios modelled in Power BI.

Employee Absenteeism Analysis — HR Health & Risk Analytics (20,000 records) | *Python · Scikit-learn · Tableau*

- **Structured an 8-model comparison pipeline** (Random Forest, XGBoost, LightGBM) predicting absent hours with 85% classification accuracy; identified Age and Length of Service as the strongest predictors of chronic absenteeism.

Fraud Detection — Revolut Transactions (688K records) | *Python · Scikit-learn · Random Forest*

- **Engineered 33 behavioural and velocity features** across 688K transactions; trained a Random Forest classifier achieving 88% recall at 12% FPR on the held-out test set and outperformed a baseline logistic model by 70% in F1 score.

TECHNICAL SKILLS

SQL: PostgreSQL · MySQL · DBeaver · CTEs · Window Functions · Star Schema / ERD Design · ETL Pipelines
Python: Pandas · NumPy · Scikit-learn · Matplotlib · Seaborn
BI / Viz: Power BI · DAX (Measures & Calc. Columns) · Tableau · Drill-through · KPI Dashboards · Business Intelligence
Statistics: Hypothesis Testing · A/B Testing · Regression Analysis · Confidence Intervals · Clustering · Predictive Modelling
Other: Excel (VBA · Power Query · Pivot Tables · Advanced) · Git / GitHub · Data Cleaning / ETL· REST APIs

EDUCATION

MSc Data Science & Computational Intelligence — First Class Honours — 2022 – 2023
Coventry University, Coventry, UK · ML · Big Data Analytics · Statistical Modelling

BE Computer Science — 2017 – 2021
G.H. Raisoni Institute of Engineering and Technology, Nagpur, India
